

FOR IMMEDIATE RELEASE:

**DelStar Technologies, Inc. Offers New Electrostatic Media**

MIDDLETOWN, DE (November 17, 2009) – DelStar Technologies, Inc. announced today that they are currently offering a new air filtration product, Alphastar Triboelectric Media. The unique electrostatic needlefelt is manufactured by ECN Industries, and DelStar Technologies has accepted the exclusive distribution rights for the company's flagship media.

Alphastar Triboelectric Media, developed with a proprietary fiber blend, produces higher filtration efficiency, at lower resistance, than similar weighted electrostatic products. Designed with the most advanced electrostatic engineering developments seen in the past 15 years, DelStar Technologies is excited about the opportunity to sell Alphastar media as an extension of their filtration roll-good collection, as well as incorporated into innovative composites. By utilizing layers of Naltex® netting and DelPore® meltblown media, the potential performance results of these composites will be unmatched in the filtration industry, allowing DelStar to provide new opportunities for filter development.

DelStar Technologies will be introducing the benefits of Alphastar Triboelectric Media to the air filtration market. Its high dust loading capacity, with low pressure drop, will advance vacuum bags, cabin air filters, and HVAC furnace filters. Its low resistance and excellent sub-micron particulate filtration efficiency will be important to facemask and medical filter manufacturers. The developmental composite products will provide further advantages for processing and reducing filter size and weight.

DelStar Technologies, Inc., headquartered in Middletown, DE, has manufacturing operations at that location, as well as in Austin, TX; Richland, PA; El Cajon, CA; and Suzhou, China. DelStar Technologies also has international sales offices in Bristol, England and Shanghai, China.
